

STREAMLINE

abba·commercials
Automotive Evolution

Streamline 2 is our general purpose muck shifter. Updated in 2010, with a new profiled rear frame, lighter than its main rival, but around 500 kg heavier than Predator, Streamline 2 is a great value durable body.

STREAMLINE

Constructed on a conventional parallel flange channel under-frame, Streamline 2 has a Brinell 450 floor, pressed to include the diagonal fillets. It has double skinned, high tensile mild steel sides.

Streamline 2 offers a specification in excess of its major competitor and is better value for money, this is simply because Abba are more efficient manufacturers.

As with Predator numerous options are available, weighing, sheeting, livery in our low bake ovens, a choice of tipping gears from major manufacturers including Edbro and Hyva.

We welcome potential customers to our manufacturing centres, come and see how we design and build, there is usually something interesting going on.

Abba operate a fair pricing policy, the price we offer you will relate to our manufacturing costs, and the volume within any given order.

KEY FEATURES

- **Three year structural warranty**
- **Available for rigids operating at 26-32 tonnes GVW.**
- **HARDOX™ Brinell 450 wear plate floor**
- **Many options available.**
