

WORKSTATION

ABBACOMMERCIALS.COM

abba·commercials
Automotive Evolution

The Workstation range is Abba Commercials' drop-side body product, available from 3.5 to 32 tonnes in tipping and fixed body versions. Workstation is designed with some simple principals in mind.

WORKSTATION

Workstation, like all Abba Commercial products, has a high strength to weight ratio.

Workstation is built to the absolute lowest height possible on any given chassis.

Workstation is produced on computer controlled equipment ensuring consistent quality and repeatability.

Workstation drop panels are made from a single sheet of steel or aluminium, and feature our unique radiused panel top which ensures safe handling and avoids ragged joints after use.

Workstation has a patented sub-frame and safe access system. There are more than thirty options, including insulation, towing, manual handling equipment, sheeting, etc.

Livery will last as panels are produced from Zintec as standard, paint is acrylic and applied in our low bake commercial ovens, customers livery, Chapter eight and Conspicuity signage are all available.

The Workstation body system is also available in combination with a lorry loader in either hook or bucket configuration. As with all other Abba products we offer and recommend HMF cranes.

Whatever your Drop-side body requirement, consider Workstation. Give Abba Commercials the opportunity to build a specification to suit your business, we believe it will be good value, safer and more efficient than the product you operate today.

KEY FEATURES
